Swiss series PDU, On/off switch

- Aluminum-alloy shell

power distribution unit (PDU) is a device fitted with multiple outputs designed to distribute electric power, especially to racks of computers and networking equipment located within the data center. Data centers face challenges in power protection and management solutions. Many rely on PDU monitoring to improve efficiency, uptime, and growth.

For Home/office's network and security needs, Expanded USB port creates its possibility to resident application. Furthermore, Standalone USB port comes with convenient operation for a wide range of network and telecom equipments.
